

# PW-System

## Solar panel support structure description

Pannonwatt Zrt. has been developing its self-manufactured solar panel structures based on the experience accumulated during construction of various solar parks with the total capacity of several hundred megawatts. The PW-SYS structures are made of increased durability, hot-dip galvanized, or special, Magnelis-coated steel, thus guaranteeing maintenance-free operation for a minimum of 25 years. The system is modular, therefore it meets all installation needs, either a configuration of a 20–25–30–35° tilt angle or a vertical or horizontal solar structure. With the help of our unique solutions this product range allows us to realize all the needs and ideas of our customers and partners.

## H6-PW60/72

**Arrangement of modules:**

6-row, horizontal

**Tilt angle:** 20°/25°/30°/35°**Installation:**

post driven ground mount

**Solar module size:**

60-cell (120 half-cell)

72-cell (144 half-cell)

**Material:**

high strength structural steel  
S350GD

**Anti-corrosion coating:**

hot-dip galvanizing  
optional Magnelis coating

PW System also meets Eurocode 1 standard, and are sized to withstand up to 110km/h wind load and 100 cm snow.

**Magnelis®**  
INCLUDED

**PW-SYS**
